

Success by design

Our company, **Info Power To The People**, was founded (in 2004) by committed, dependable and supportive professionals with long track-records of dedicated service in the community.

We designed software to record the data that is produced by you and published by others. With it, you can fill in the gaps of your current data system and present an advanced analysis of your results .

The software, **INFO INTO POWER v1.0**, supports your organization's ability to adapt quickly to changing conditions, requirements and opportunities. The tools used to record data and create reports are easy to set up and later modify.

INFO INTO POWER

v1.0

**Software
for
Organizers
of
Community
Progress**

Info Power To The People[®]

Teamwork

The software's structure emphasizes partnerships, in order to achieve sustainable social/economic progress.

Use it to showcase results:

- ◆ within the organization
- ◆ between staff and customers/clients
- ◆ among the membership of advocacy coalitions or collaboratives.

Leadership

The real-time feedback and transparent accountability (provided by the software,) support staff that aspire to excellence.

The software's data collection tools are easily updated by you. This permits innovative ideas to be tested, when staff have insights about trends and techniques.

Achievement

INFO INTO POWER v1.0 is for an organization with limited resources and significant goals for cost-effective management.

Its design consistently focuses staff on their mission and on the "best practices" that generate customer satisfaction.

Its ease-of-use facilitates experiential learning of all tasks, from the basic skills to the advanced procedures. The time needed to train staff is minimal.

Flexibility

You can use any other information system alongside ours, as long as it also can export and/or import data. This feature permits consolidated reports from different databases and allows your organization to apply **INFO INTO POWER** incrementally.

Competitiveness

You can replicate, in the software itself, the content of any tool used to gather data:

- ◆ questionnaire
- ◆ scaled assessment
- ◆ survey

It organizes the data into reports that meet any requirements:

- ◆ business plan
- ◆ client progress report
- ◆ community forum presentation
- ◆ contract compliance report
- ◆ needs assessment
- ◆ grant proposal criteria
- ◆ strategic plan

Data searches and filters generate faster, better review of outcomes. These features allow systematic targeting of quantitative data analyses to the requirements of a contract compliance report or to write a grant proposal; and they support clustering of qualitative data to build impressive narratives.

Whenever specialized report formats are needed, we can create an "add-on" to the software that meets your needs.
